

- High accuracy
- High cycle life
- Stainless steel
- Submersible
- Infinite resolution

These transducers are for displacement / position measurement. They make an accurate position measurement of the movement of the armature (the sliding part) relative to the body of the displacement transducer.

This transducer uses the Linear Variable Differential Transformer (LVDT) principle which means that it is probably the most robust and reliable position sensor type available. The strength of the LVDT sensor's principle is that there is no electrical contact across the transducer position sensing element which for the user of the sensor means clean data, infinite resolution and a very long life.

Our submersible displacement transducers are designed to make measurements whilst submerged in suitable liquids. Fluids which are non-magnetic can be allowed to flood the armature tube without affecting the operation of the transducer.

This series of displacement transducer is available as either an unguided, captive or spring return version.

Unguided version.

On our ACW unguided LVDTs the armature assembly is a separate component, to make a measurement the user must guide the armature inside the body without touching the sides. Our ACW unguided position measurement transducers are appropriate where external guidance is available and give truly non-contact operation

Captive guided version.

Our ACW captive guided displacement transducer has bearings to guide the armature inside the measurement sensor. Our ACW captive LVDTs are for position measurement applications where guidance may be poor and end bearings may be required.

Spring return version.

CL1=62mm
D1=20,6mm $\pm 0,12$ mm
D3=4,75mm
X=Centre of range

Our ACW spring displacement transducer has bearings to guide the armature inside the measurement sensor and a spring which pushes the armature to the fully out position. Our ACW spring return LVDTs are appropriate where it is not possible to connect the transducer armature to the moving component being measured.

Electrical termination options

Standard cable - End exit connector with cable fitted

Cable length = 5m
Operating temperature range* = -25°C to 90°C
Maximum static pressure* = 1000kPa

Cable Option 1 - End exit solder pins for customer to fit their own cable

Operating temperature range* = -40°C to 125°C

Cable Option 2 - End exit fully sleeved integral cable

Cable length = 600mm to 7m
Operating temperature range* = -40°C to 100°C
Maximum static pressure* = 3,4MPa

Cable Option 3 - End exit part-sleeved integral cable

Cable length = 1m to 100m
Cable sleeve length = 600mm
Operating temperature range* = -40°C to 90°C
Maximum static pressure* = 1,7MPa

Cable Option 5 - End exit integral MI (mineral insulated) stainless steel cable

Operating temperature range* = -40°C to 200°C
Cable length = 100mm to 70m
Maximum static pressure* = 21MPa
